

IS-8 sector locality change: 2019 -> 2025

Each arrow = one IS-8 growth sector; overlap mapping, each IS-8 independent (not summable)

How local are its customers? (share it sells within region)

How local are its suppliers? (share it buys from within region)

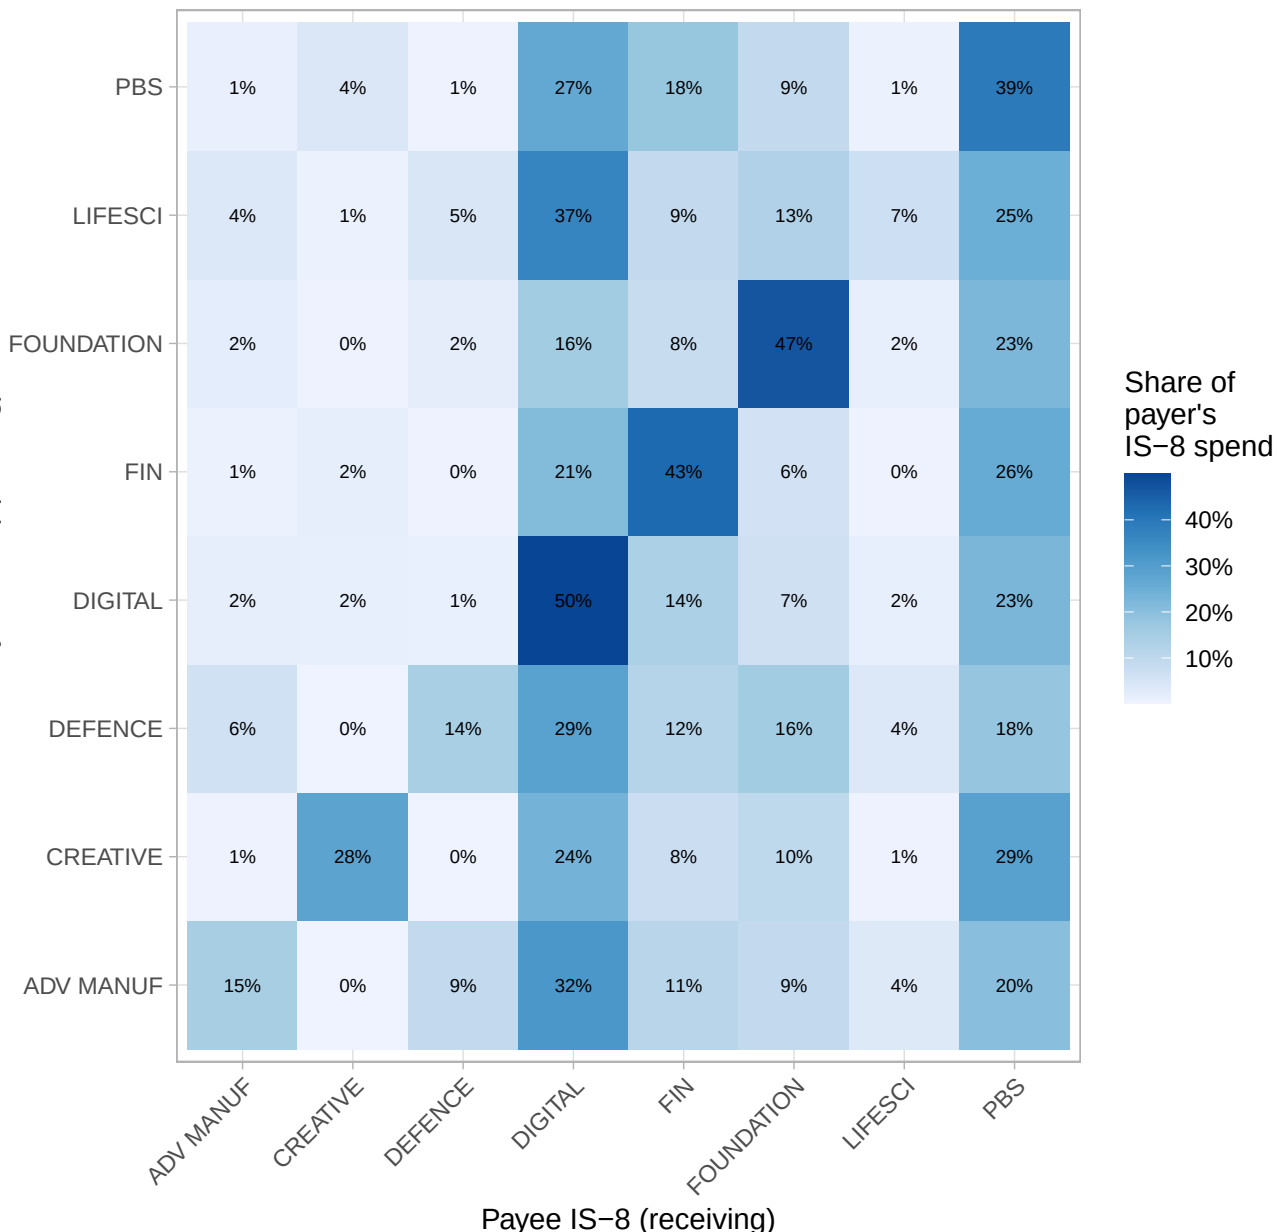

Direction of change ➡ Buying & selling nearer ➡ Buying farther, selling nearer ➡ Buying nearer, selling farther ➡ Buying & selling farther

2-digit SIC truncation: Creative/Digital/Defence coarse, Finance/PBS clean (see header)

IS-8 -> IS-8 payment flows, 2025

Row share: of each IS-8's spending on other IS-8 sectors, where it goes (partition map)

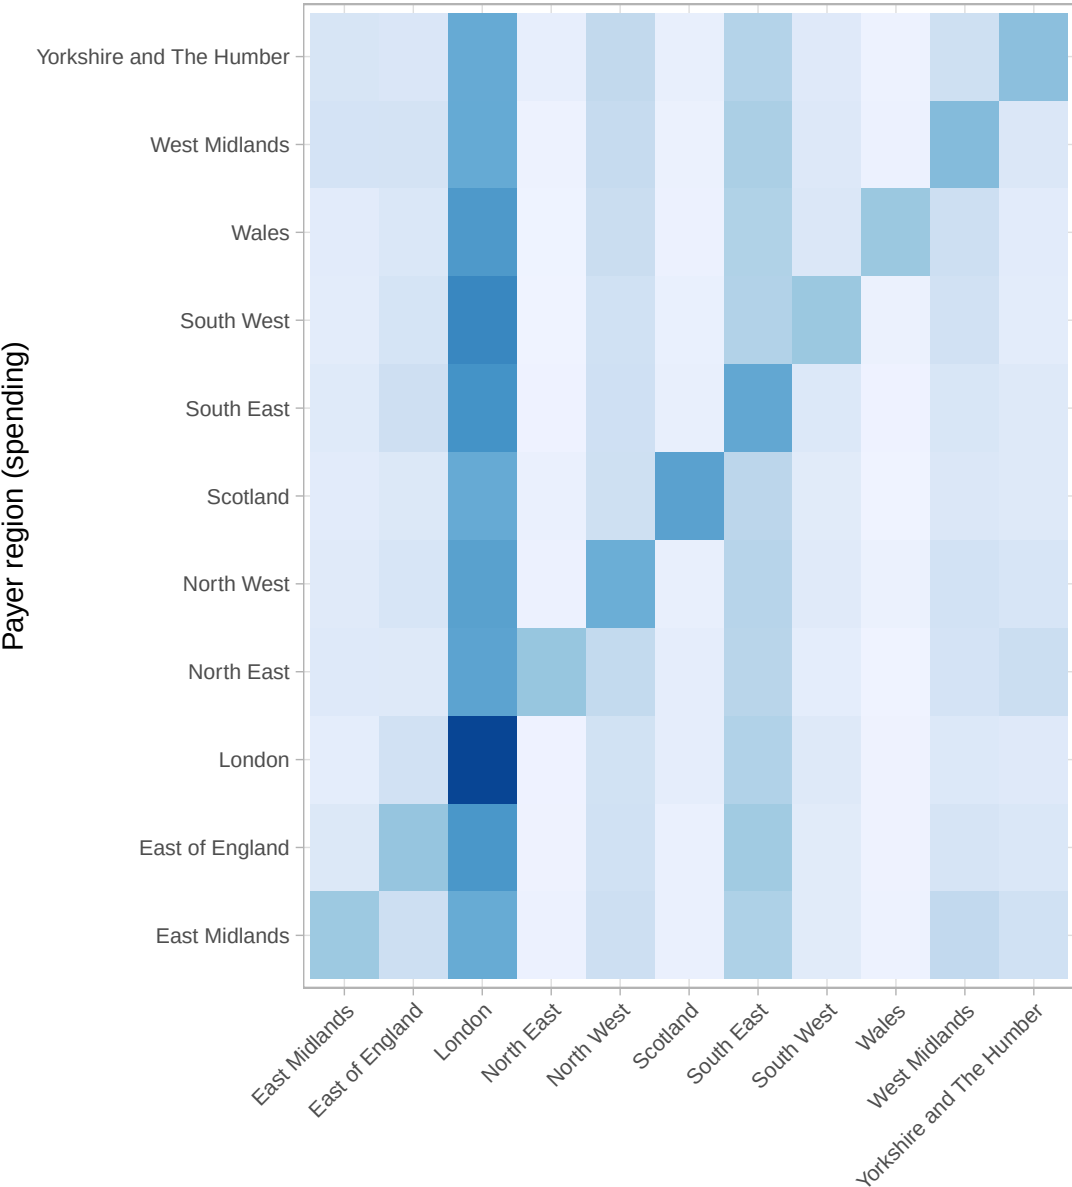

Payer IS-8 (spending)

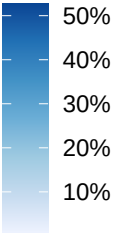

Region-to-region connectivity via IS-8 flows, 2025

Row share: of each region's IS-8 spending, what fraction goes to each region (

Payer region (spending)

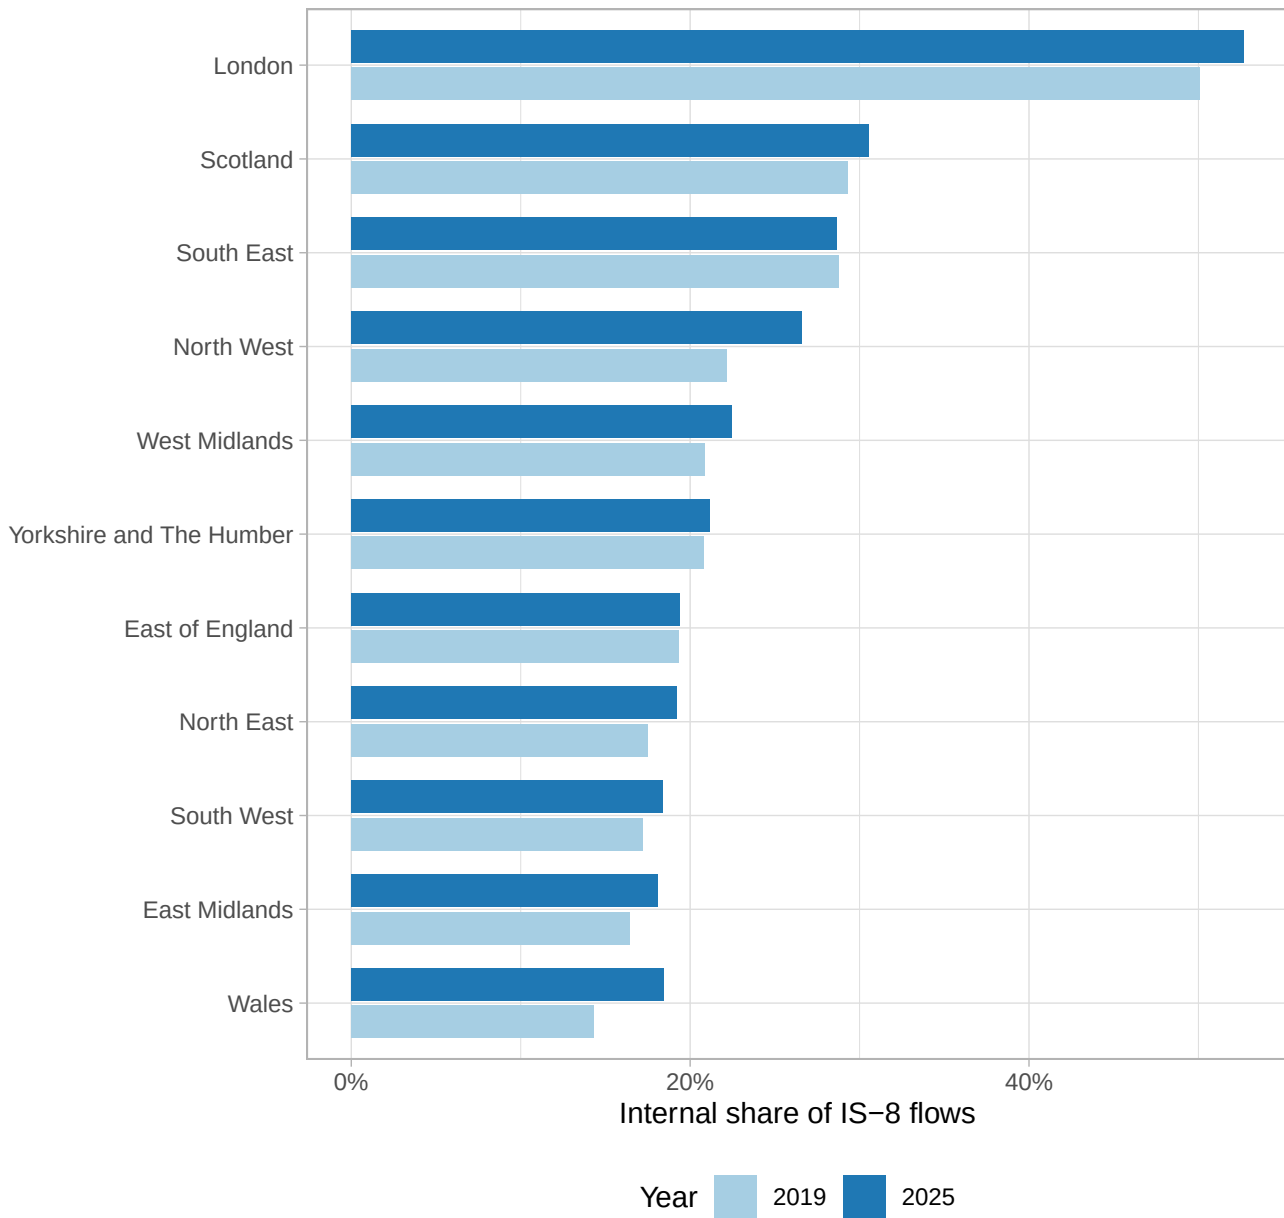

Share of payer region's IS-8 spend

Payee region (receiving)

Internal share of IS-8 flows, by region, over time

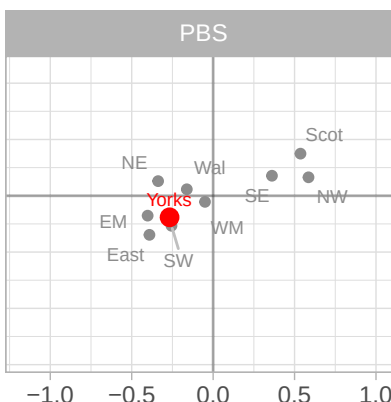

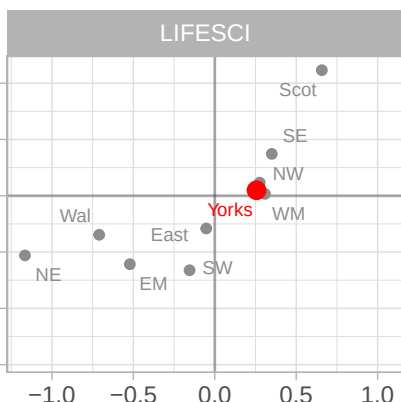

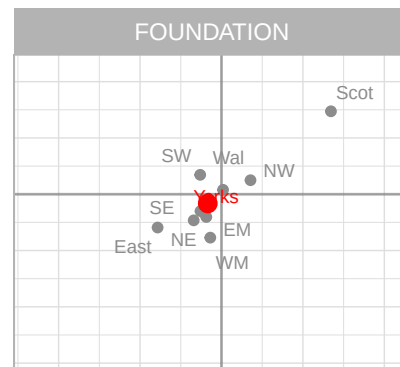

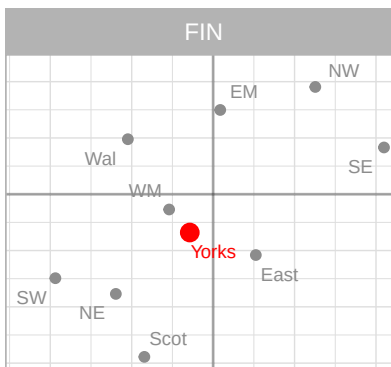

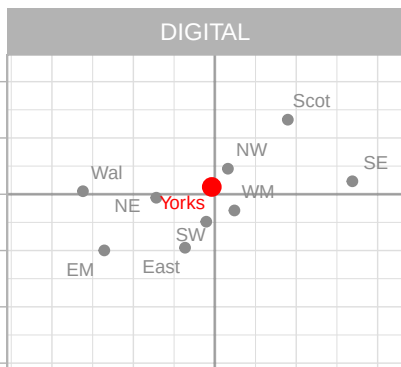

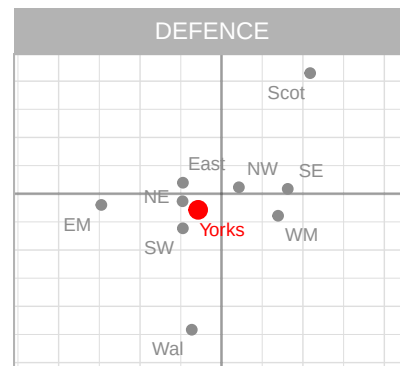

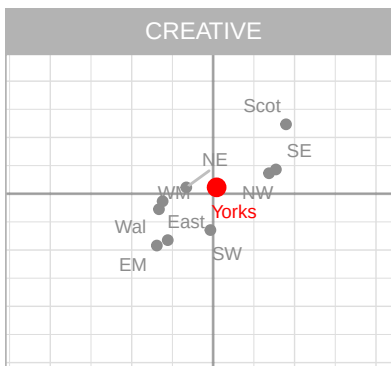

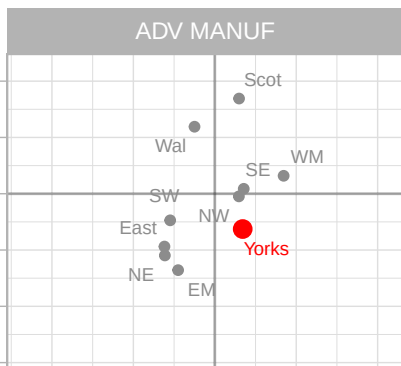

Share of each region's IS-8<->IS-8 payments kept within region (2019 vs 2025)

IS-8 flow-locality LQs by region, 2025 (Y&H in red)

Each point = one region's IS-8 vs the typical region (leave-one-out mean) (London excluded from typical)

Customers: how local vs typical region (LQ, log2: 0 = typical, +1 = 2x more local selling)

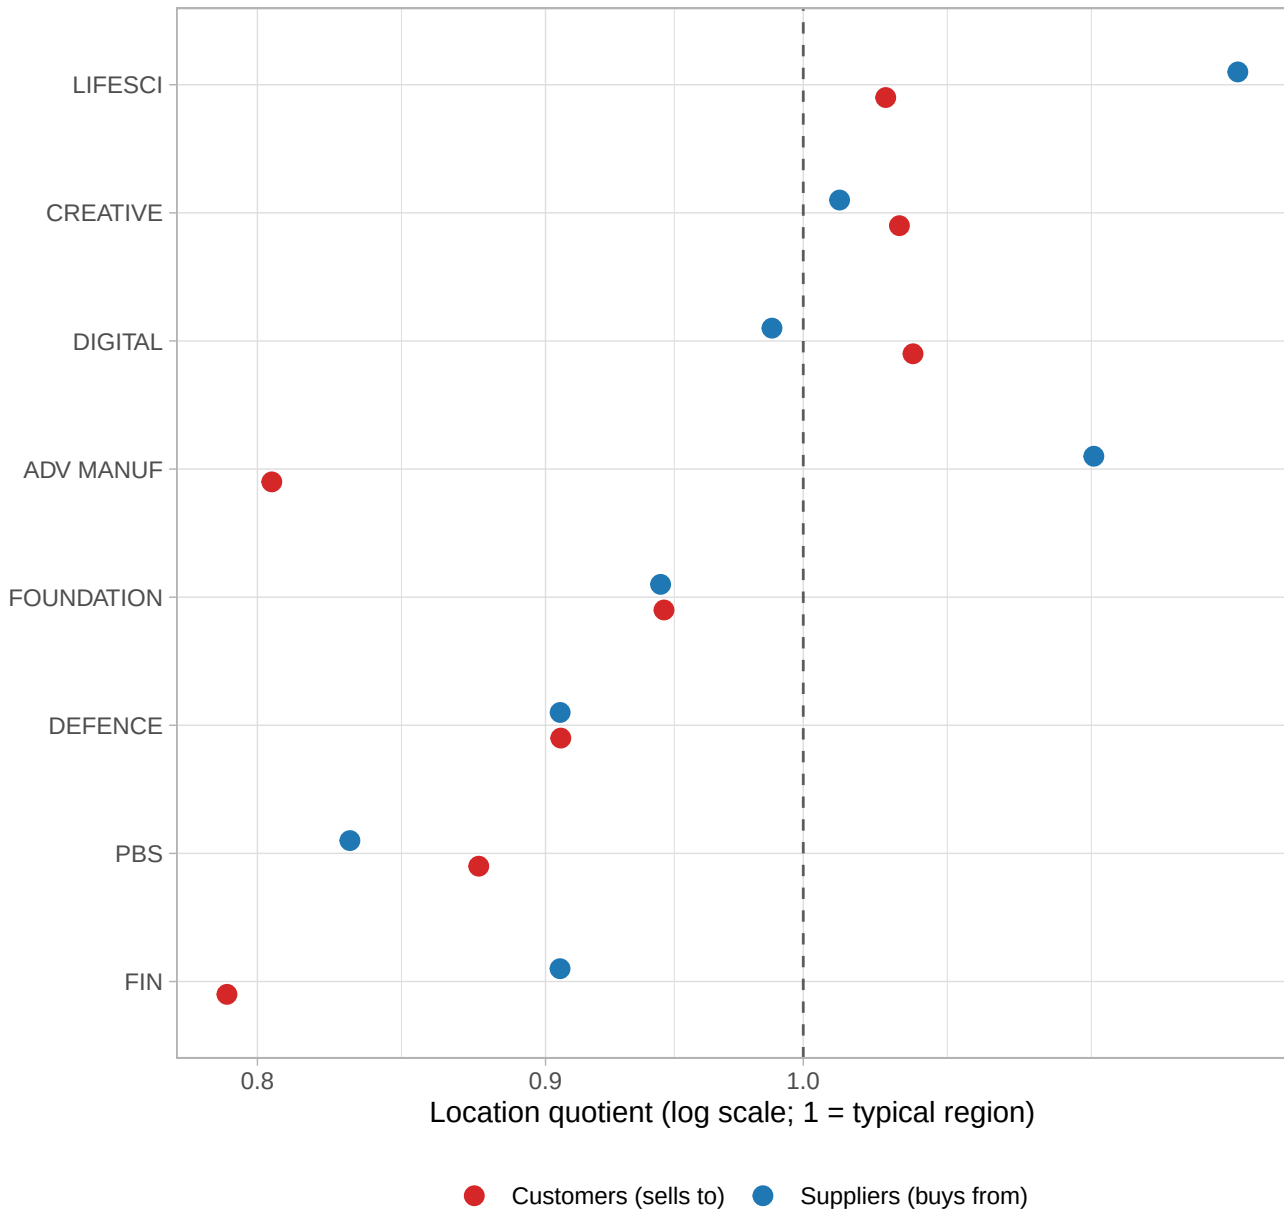

Suppliers: how local vs typical region (LQ, log2: 0 = typical, +1 = 2x more local buying)

Top-right = both suppliers AND customers more local than the typical region; bottom-left = more traded at both ends

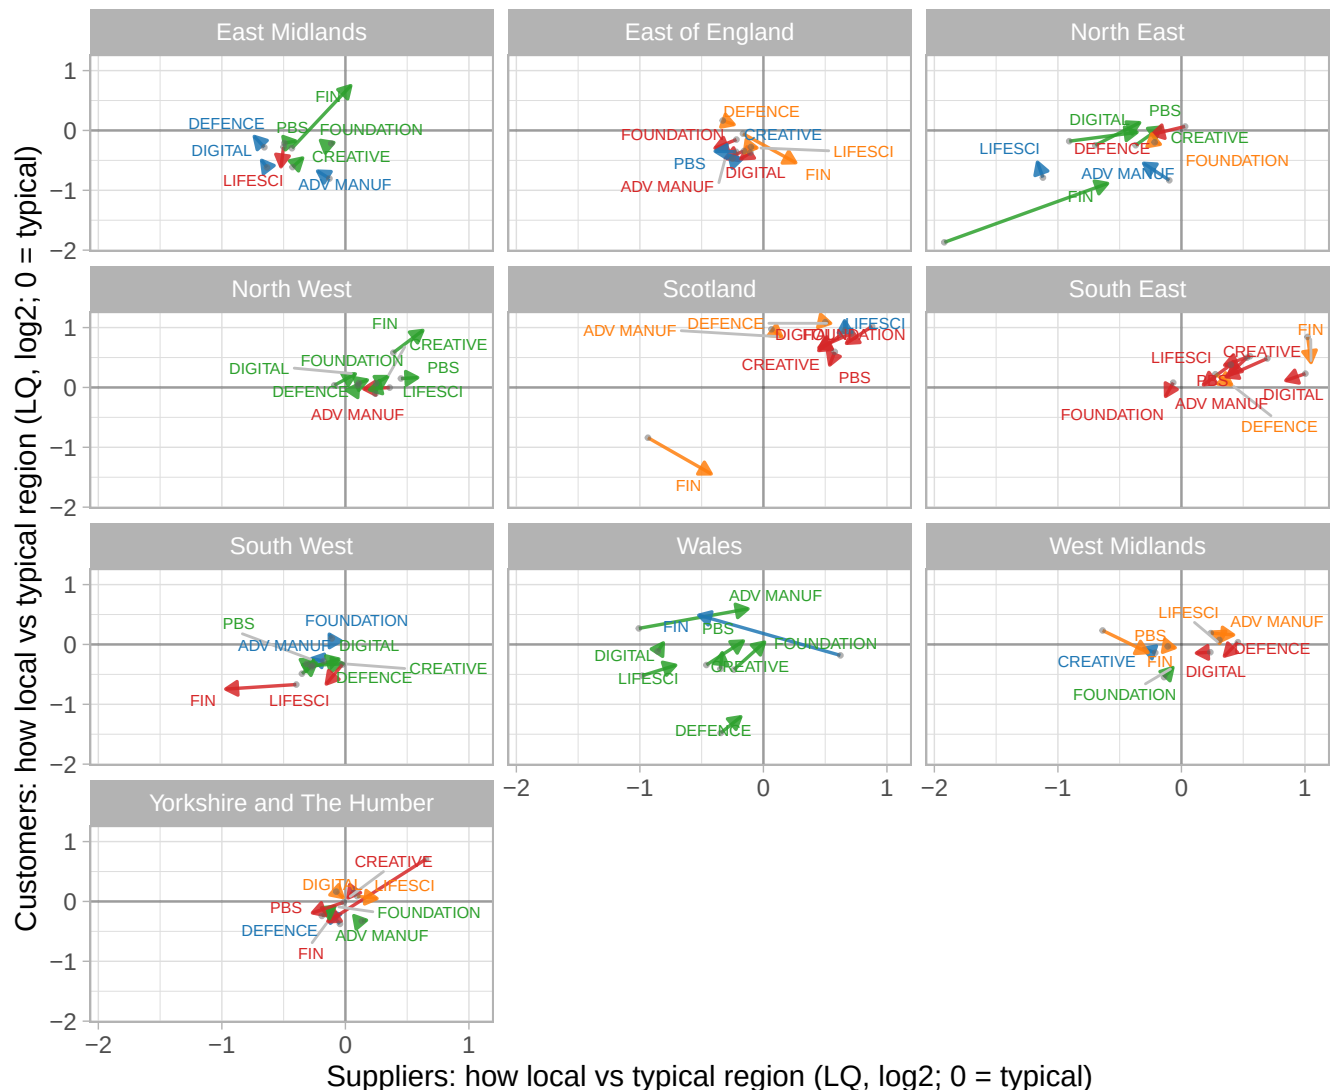

Yorkshire & Humber IS-8 flow-locality vs the typical region

2025: LQ > 1 = more locally embedded than the typical region's same IS-8 (London ex

IS-8 flow-locality LQ change: 2019 -> 2025

Arrows = movement in LQ space, RELATIVE to the typical region (recomputed each year) (London = 0)

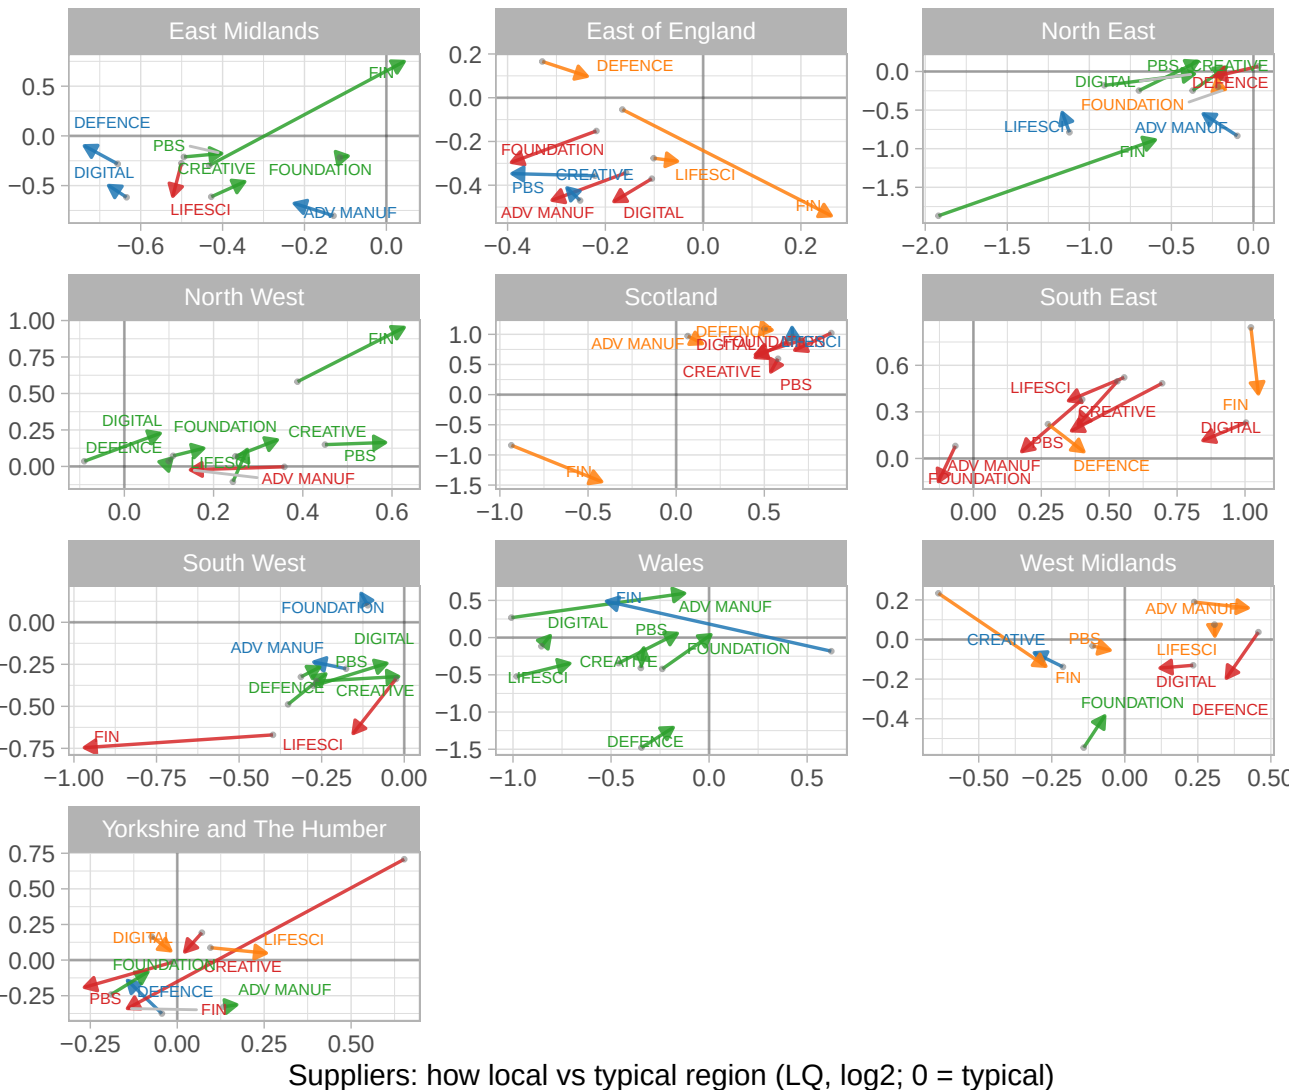

change (vs peers) → Buying & selling nearer (vs peers) → Buying farther, selling nearer → Buying nearer, selling farther → Buying farther, selling nearer

Relative to peers, not absolute locality (cf section 1 for absolute). Green = buying & selling nearer than peers; red = buying & selling farther than peers

IS-8 flow-locality LQ change: 2019 -> 2025

FREE axis scales: each region zoomed to its own arrows (lengths not comparable across panels)

Customers: how local vs typical region (LQ, log2; 0 = typical)

f change (vs peers) → Buying & selling nearer (vs peers) → Buying farther, selling nearer → Buying nearer, selling farther → Buying farther, selling farther

Relative to peers, not absolute locality (cf section 1 for absolute). Green = buying & selling nearer than peers; red =

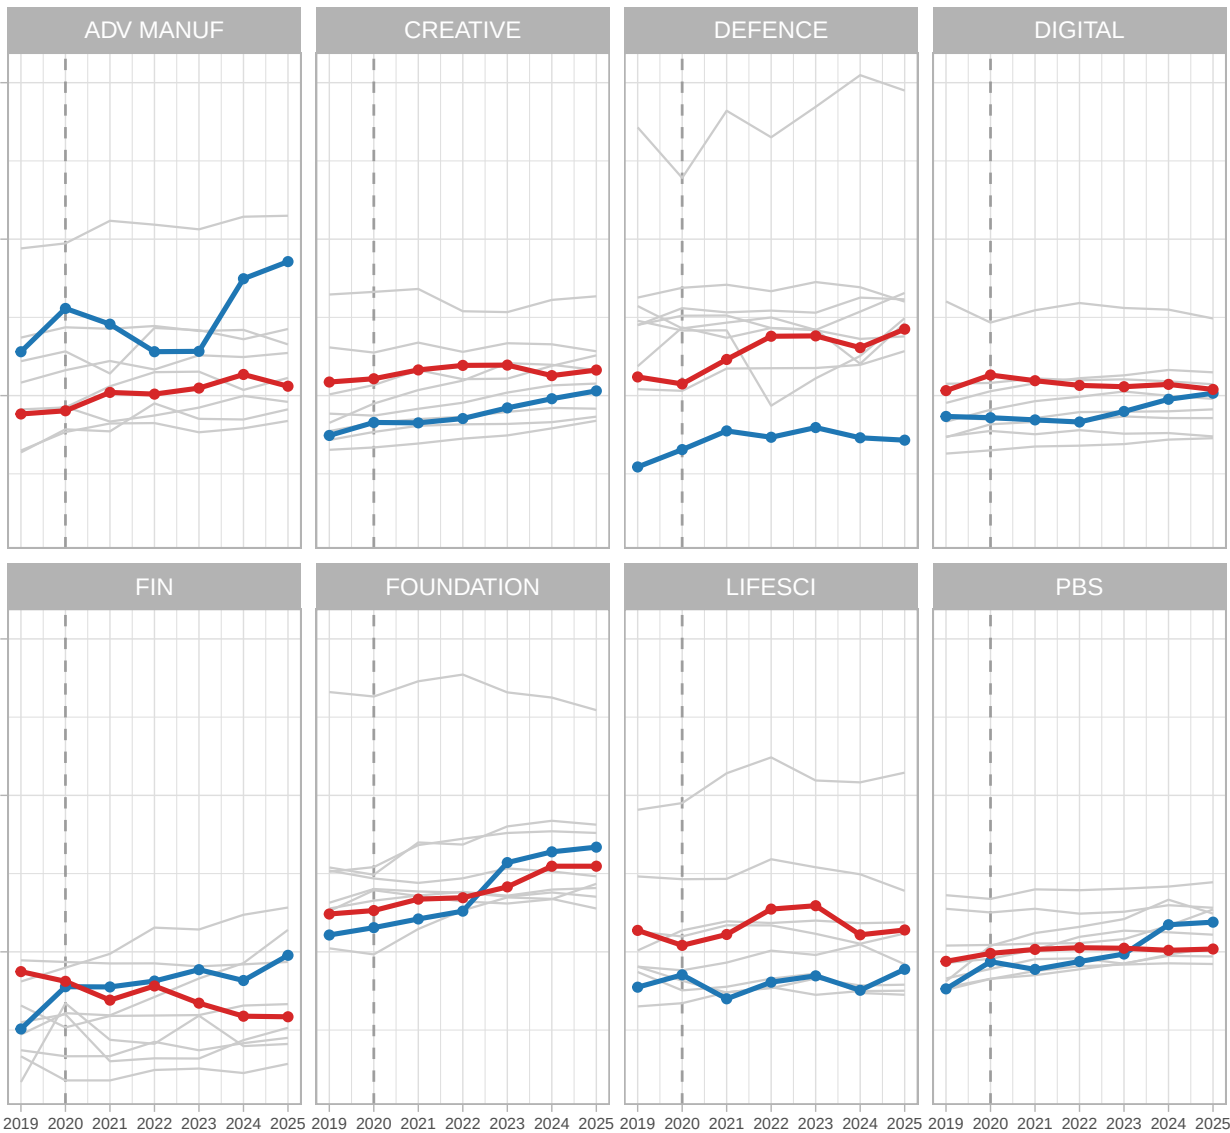

How local are each IS-8's SUPPLIERS over time, 2019–2025

Grey = other regions; dashed line = 2020 (pandemic onset). Data starts 2019 – one pre-pandemic year only. (London)

How local are each IS-8's CUSTOMERS over time, 2019–2025

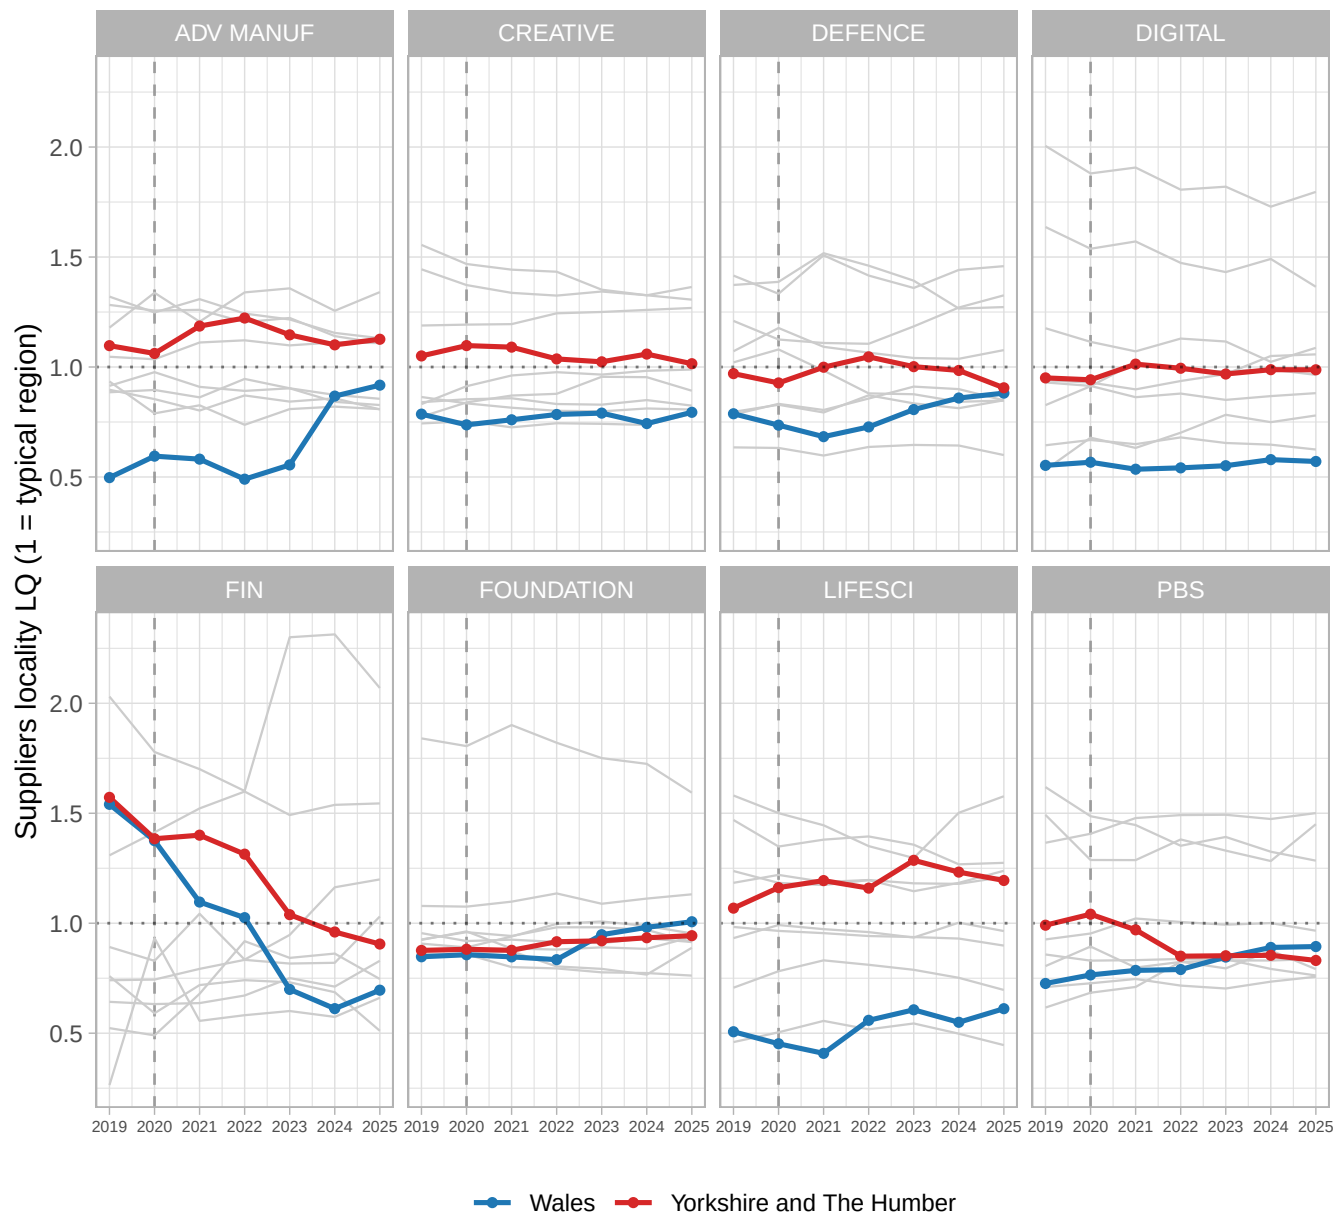

Customers: local share of sales

—●— Wales —●— Yorkshire and The Humber

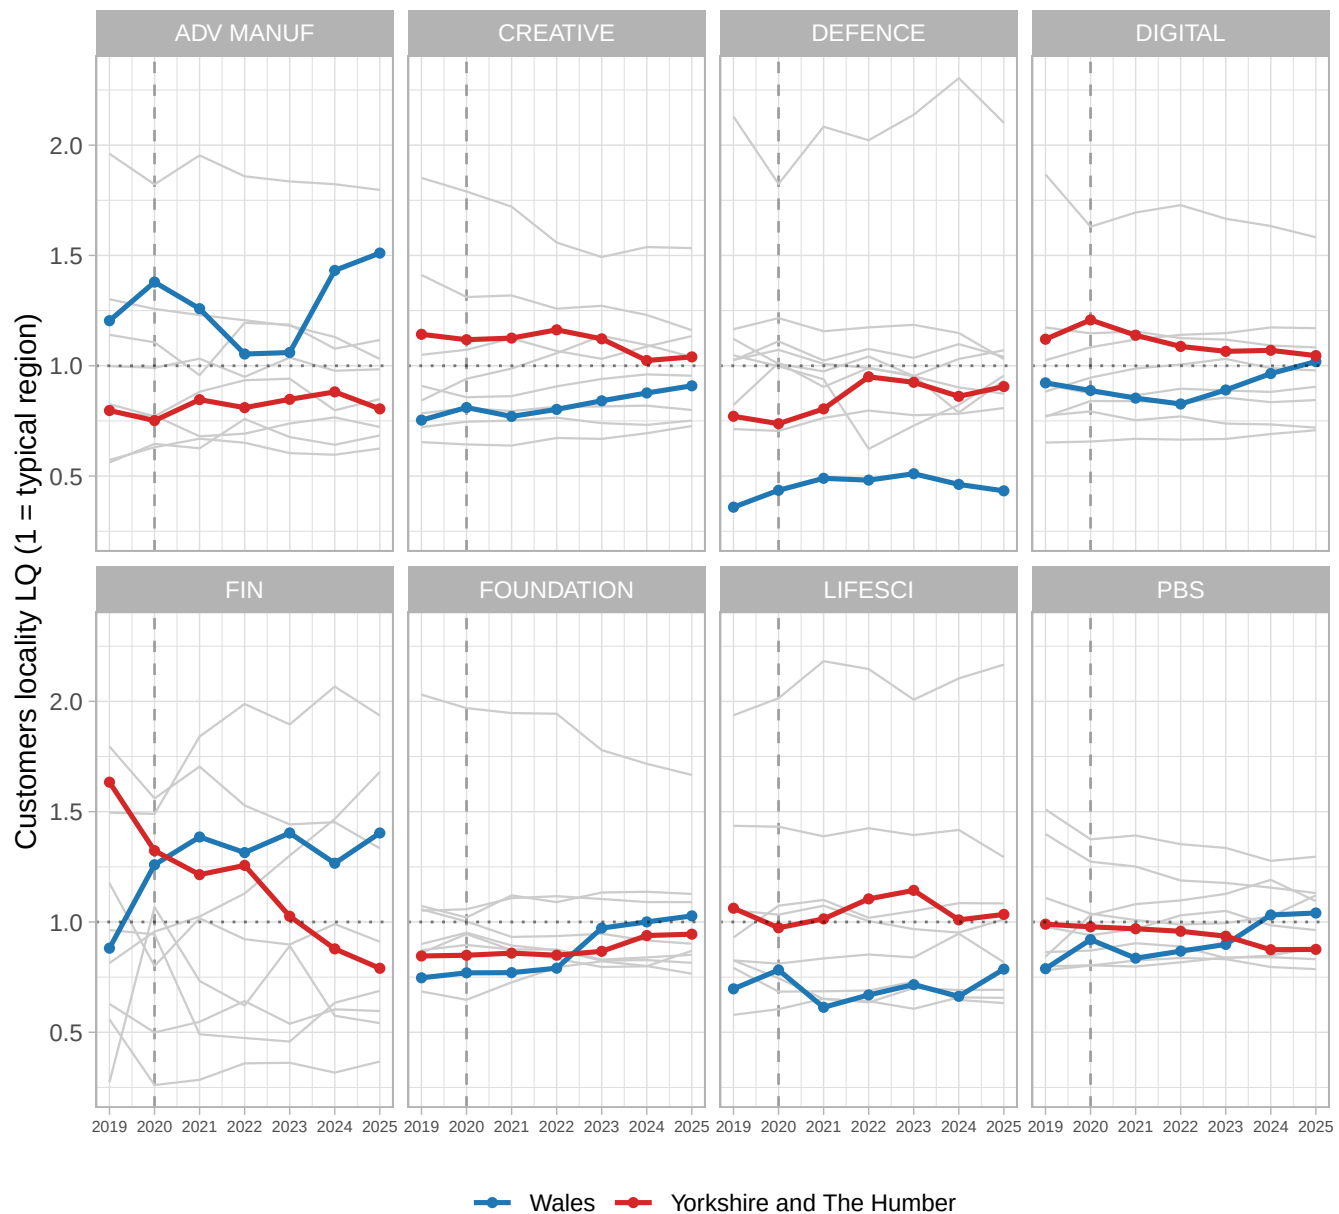

Grey = other regions; dashed line = 2020 (pandemic onset). Data starts 2019 – one pre-pandemic year only. (London)

SUPPLIERS locality vs typical region (LQ) over time, 2019–2025

Grey = other regions; dashed line = 2020 (pandemic onset). Data starts 2019 – one pre-pandemic year only. (London

CUSTOMERS locality vs typical region (LQ) over time, 2019–2025

Grey = other regions; dashed line = 2020 (pandemic onset). Data starts 2019 – one pre-pandemic year only. (London
